

Boom Rig

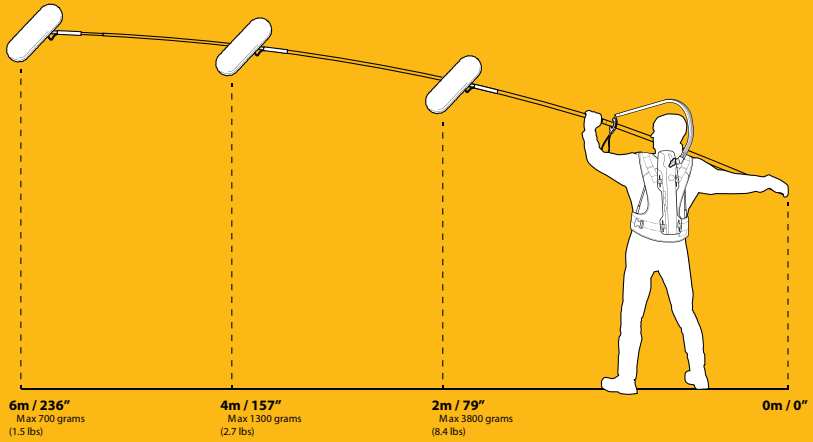

After working with this new invention for more than 5 years, we are excited to announce that the Easyrig Boom Rig is finally released!

The Easyrig Boom Rig is a new chapter in the story of Easyrig. After successfully helping camera operators for more than 30 years, we have now taken our expertise in weight distribution and support to focus on a new market: Boom Operators & Sound Engineers.

We have been working with experts in the field to perfect this new invention, such as Kevin Cerchiai from Atlanta, Ljudfadern and SoundImage from Sweden, and Thomas Wallis from Germany, among many others.

Designed and made in Sweden

Boom Hook with rollers

Power adjustment

Mixer holder

The Easyrig Boom Rig is designed in a way that all the weight of the boom pole is on your hips while still being able to have full control of the boom pole. You still operate the boom with your hands as you always have, but you can now do it without damaging your shoulders, arms, or back.

The Easyrig Boom Rig allows the user to operate high- and low-angles. You can attach a mixer in the front to distribute the weight to the hips. You can also fasten the boom to the side of the vest to be able to free both your hands while it is attached to the rig.

It is available right now worldwide; you can order it from any of our resellers/distributors. Design- and trademark worldwide.

Check out the website easyrig.com to see the release video of the Easyrig Boom Rig.
