- In addition, turn off the power and switch off the main power when you are away from the projector.

Do not project an image with the lens cover attached.

- Doing so can cause fire.

CAUTION:

Before replacing the projection lens, be sure to turn off the power and disconnect the power plug from the wall outlet.

- Unexpected projection of light may cause injury to eyes.
- Replacing the projection lens without removing the power plug may result in electric shock.

Do not stand in front of the lens while the projector is being used.

Doing so can cause damage and burns to clothing.

- Strong light is emitted from the projector's lens.

Attaching the Lens / Detaching the Lens

Before replacing the projection lens

Return the projection lens to the home position before detaching or attaching it. Attaching or detaching of the projection lens may not be possible if the lens is not in the home position. For details on how to return the lens to the home position, refer to the operating instructions of the projector.

Attention

- Turn off the projector before replacing the fisheye lens.
- Store the removed protection lens safely without subjecting it to vibration or impact.
- Remove the lens covers before attaching the fisheye lens.

- Do not touch the lens surface with your bare hands. Any fingerprints or smudges on these surfaces will be magnified and lower the quality of the image displayed on the screen.
- The lens is made of glass. The lens could be damaged if brought into contact with or rubbed against hard objects. Handle the lens carefully.
- Wipe off any dust or particles on the lens with a cloth that is soft, dry, and clean.
Do not wipe with fluffy cloths, cloths that contain oil or water, or dusty cloths.
- When using the fisheye lens, we recommend using it with the ET-PLF10 lens fixing attachment.
- When using the ET-PLF10 lens fixing attachment, the mounting bracket may not attach properly if the lens is not moved to the home position before attaching.

Attaching the Lens / Detaching the Lens (continued)

Attaching the Lens

The illustration for this procedure uses PT-RZ21K as an example.

- 1) **Insert the fisheye lens while aligning its marker (orange) with the marker on the projector (○ to the left of "LOCK"), and turn it clockwise until it clicks into place.**

- 2) **Use the lens drop prevention screw supplied with the projector to secure the fisheye lens.**

- Use a Phillips screwdriver to secure the screw in the hole to the right of the marker (orange) on the fisheye lens (see left illustration).

Attention

- Gently turn the fisheye lens counterclockwise, and verify that it is secure.

Attention

- For projectors that have a projection lens cover, remove it first. For details, see "Attaching/removing the projection lens (optional)" in the operating instructions for the projector you are using.
- After attaching the projection lens, turn on the projector and perform lens calibration. (➡ Page 7)

Focus adjustment function

The focal balance between the center and periphery of the projected image changes depending on the size of the projected image. The lens is equipped with a focus balance adjustment function for the screen periphery.

■ Adjusting the focus

- 1) **Operate the projector to align the focus of the center of the projected image.**
- 2) **Loosen the lock screw and turn the peripheral focus adjustment ring by hand as shown in the figure to the left to adjust the peripheral focus on the screen.**
- 3) **Check the focus at the center of the image again, and operate the projector to make fine adjustments.**
- 4) **Tighten the lock screw.**
 - The peripheral focus adjustment ring is locked.

Note

- The projection distances (THROW DISTANCE) displayed on the peripheral focus adjustment ring are approximate guides.

Attaching the Lens / Detaching the Lens (continued)

Detaching the Lens

The illustrations in this procedure depict use of the PT-RZ21K as an example.

Lens drop prevention screw

1) Remove the lens drop prevention screw.

- Use a Phillips screwdriver to remove the screw in first hole to the right of the marker (orange) on the fisheye lens.

2) While pressing the lens release button, turn the fisheye lens counterclockwise, and remove it.

- Turn the fisheye lens counterclockwise until its marker (orange) aligns with the marker on the projector (◦ to the left of "LOCK").

Attention

- Store the removed fisheye lens safely without subjecting it to vibration or impact.
- Store the removed lens drop prevention screw safely for future use.
- Attach the supplied lens cover before storing the lens.

Lens release button

Attention

- For projectors that have a projection lens cover, remove it first. In addition, there are cases where the attachment method or removal method of the projection lens cover differs from the procedure (illustration) described above depending on the model being used. For details, see "Attaching/removing the projection lens (optional)" in the operating instructions for the projector you are using.

Note

- The illustrations of projectors in this manual are for informational purposes only and do not represent a specific projector model. Configurations may vary with the model.
- As the front end of the lens approaches closer to a spherical or column-shaped screen center, uniformity of the total focus and total brightness of the projected image is enhanced.
- The angle of view values indicated in the tables are lens optical axis angles.

Lens shift ranges

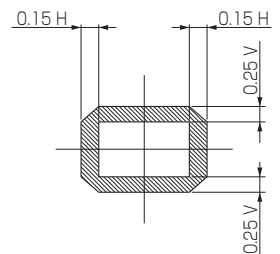

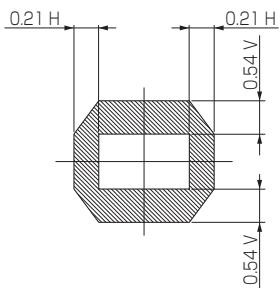

Even after moving the lens to the home position according to "Lens calibration" on page 7, you can use the position of the projected image at that position as a basis, and use the lens shift adjustment function on the projector to adjust the position of the projected image within the respective lens shift ranges.

Perform lens shift adjustment within the ranges shown in the following illustrations.

Moving the lens outside of the adjustment ranges may alter the focus.

Note

- The home position of the projector a point of origin position for the lens shift (i.e., vertical and horizontal positions of the lens) based on the results of lens calibration. It is not the optical center position of the screen.
- The lens shift ranges that are shown indicate the positional relationships between the projector's display panel (DLP chip) and lens. The screen position of the image projected on the screen does not move in proportion to the screen size. For details on the relationship between the lens shift and the projected angle of view, see "Projection relationships" (► Page 12). DLP is a registered trademark of Texas Instruments.
- When using a projector other than the above
Please see "Projecting" in the operating instructions for the projector you are using.
